DETAILS

FEATURES

Qiskit Code Assistant (Beta)

Write and optimize Qiskit code with a generative AI code assistant powered by IBM watsonx.

This experimental feature is only available, as of today, to IBM Quantum premium plan users. If you are not part of an IBM Quantum premium plan, you can use the local version See LOCAL_SETUP.md for instructions.

Increase quantum computing developer productivity and learn best practices for Qiskit and IBM Quantum Platform services with Qiskit Code Assistant!

AI

Powered by the collaborators and tools from the catalog.

When describing what the agent should generate, focus on:

- Purpose: What is the agent's role and goal?
- Actions: What tasks should it perform and how?
- Systems: Which apps or data sources should it use?
- Restrictions: What boundaries should it not cross?
- Examples: Include 1-2 realistic request examples.
- Clarity: Keep it relevant and avoid unclear jargon.
